

About The Dimension Editor Canvas

The dimension editor Canvas is where you work on the hierarchies, levels, secondary attributes, and secondary/snowflake relationships for a particular dimension.

To open a dimension in the Canvas:

1. In Design Center, open a model and switch to the **Canvas** tab.
2. Locate the dimension you want to view and select **Edit** from its context menu. The dimension opens in a separate tab in Design Center.
3. Click the **Canvas** tab for the dimension.

The Canvas shows the physical datasets that the logical dimension is based on. It shows the model from the focal point of a single dimension, whereas the main canvas shows the model from the focal point of the fact dataset.
