

FirstSibling

Syntax

```
Member_Expression.FirstSibling
```

Input Parameters

Member_Expression

A valid Multidimensional Expression (MDX) that returns a member.

Return Value

Returns the first child of the parent of a member, otherwise known as the member's first sibling. The ordering is determined by the attribute's OrderBy configuration.

Example

Return the Sales Amount for the date dimension currentMember's first sibling.

```
([DateCustom].[Retail445].CurrentMember.FirstSibling, [Measures].[Internet Sales Amount Local])
```
