# FirstSibling

## Syntax

Member_Expression.FirstSibling

## Input Parameters

**Member_Expression**
A valid Multidimensional Expression (MDX) that returns a member.

## Return Value

Returns the first child of the parent of a member, otherwise known as the member's first sibling. The ordering is determined by the attribute's OrderBy configuration.

## Example

Return the Sales Amount for the date dimension currentMember's first sibling.

([DateCustom].[Retail445].CurrentMember.FirstSibling, [Measures].[Internet Sales Amount Local])
