

KEY

The value of the member key in the original data type. KEY has the same value as KEY0 for non-composite keys and KEY property is null for composite keys.

Syntax

```
Member_Expression.KEY
```

Input Parameters

N/A

Return Value

Returns the member key value. The type depends on the mapped column binding.

Example

Sales for "Red" members only, else 0.

```
IIF([Color Dimension].[Color].CurrentMember.KEY = "Red",[Measures].[salesamount1], 0)
```
