

# Searching For Columns In Datasets

Datasets can contain a large number of columns. If you need to locate a specific column in a dataset, you can use the **Filter Columns** field to find it quickly.

To search a dataset:

1. Open the dataset in Design Center and switch to the **Canvas** tab.
2. Locate the dataset you want to search on the Canvas and enter the column name in the **Filter Columns** field.

The columns displayed in the dataset are automatically filtered based on the text you enter.
