

Viewing A Sample Of Dataset Rows

AtScale lets you to view a sample of a dataset's rows. Viewing a sample of rows allows you to examine the column values and decide which data to base your model attributes on.

About This Task

AtScale queries the underlying table and returns a limit of 10, 50, 100, or 1000 rows. You can configure the limit.

Procedure

1. In Design Center, do one of the following:
 - ▶ Open the model that contains the dataset you want to view data for and switch to the **Canvas** tab.
 - ▶ Locate the dataset you want to view data for in the **Repo Browser**.
2. Click the menu icon for the dataset and select **Data Preview**. The **Data Preview** panel opens.

Columns are listed in natural column order. Use the filter control to search for specific columns.

Note: If your data warehouse is an instance of Google BigQuery, calculated columns do not appear.
