

# Convert Panel

The **Convert** panel enables you to convert dbt semantic models to AtScale models.

**Note:** dbt model conversion is a Beta feature.

A screenshot of the 'Convert' panel in AtScale. The panel is dark-themed and contains several input fields. At the top, it is titled 'Convert'. Below the title, there are two dropdown menus: 'Source repository' with 'DBT' selected, and 'Database type' with 'Snowflake' selected. Between these dropdowns are several text input fields: 'Source repository', 'Target folder', 'Target connection', 'Target database', and 'Target schema'. Each field is currently empty.

Once you have converted a dbt model, you can view and edit it in Design Center like any other model, or deploy it for use in BI tools.

For more information on converting dbt models, see [Convert a dbt Model to an AtScale Model](#).
