Deployed Catalogs Panel
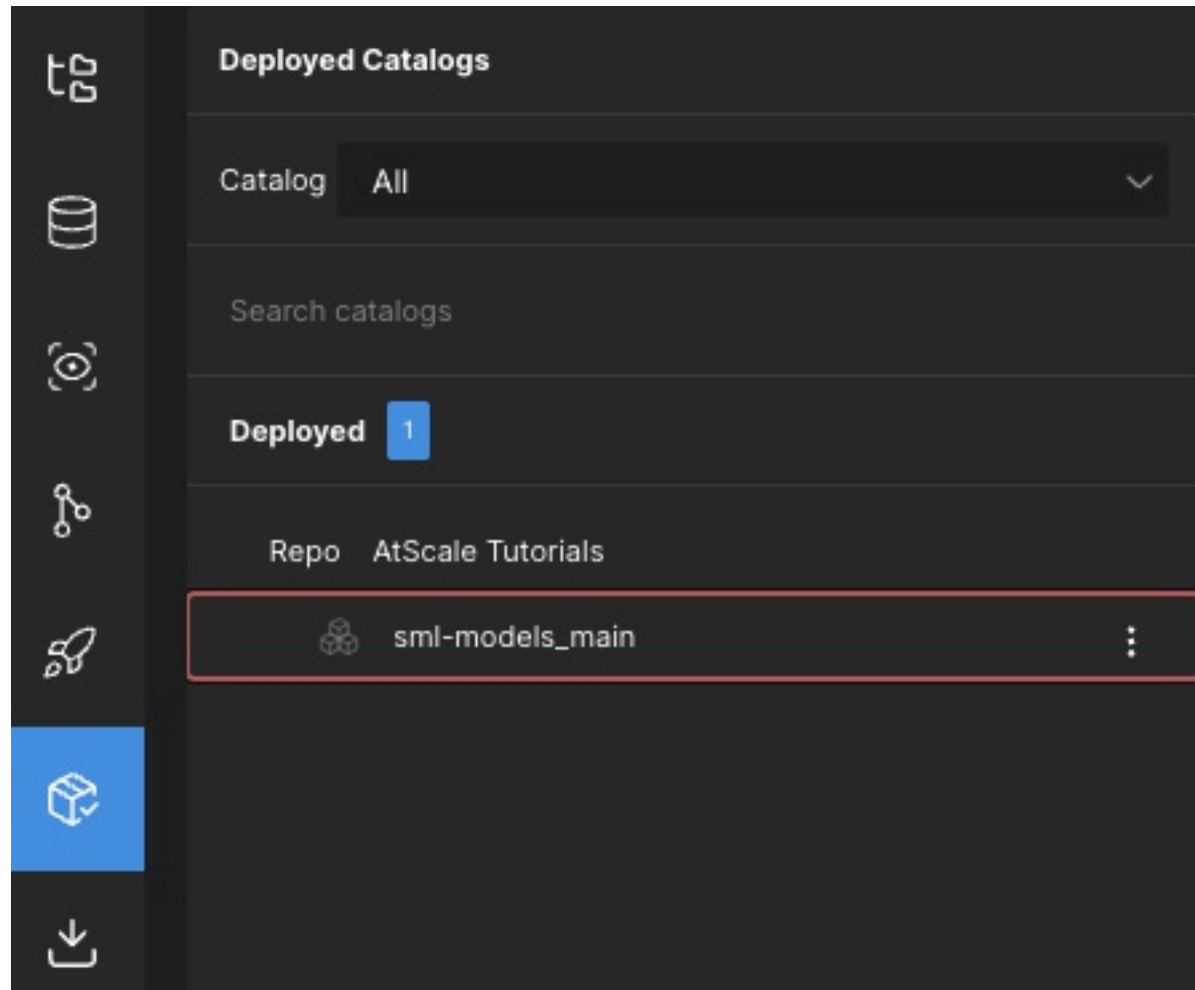

On the **Deployed Catalogs** panel, you can view your deployed catalogs and models.

From here, you can do the following:

- Search for and view your deployed catalogs and models.
- Open a deployed catalog to view its **Connection Settings**, including the JDBC strings and `.tds` files used to connect to individual models from BI tools.
- Undeploy catalogs.

For more information on deploying catalogs, see Deploying Catalogs.
