

Updating The Values Override File

You can update the configuration defined in `values.yaml` after installing AtScale.

To update your values override file:

1. Make the required changes to `values.yaml`.
2. Open a terminal window and run the following command:

```
helm upgrade atscale oci://docker.io/atscaleinc/atscale --version <version_number> -f <override_file>
```

Where `<override_file>` is your updated values override file, and `<version_number>` is the version of AtScale you're currently on.
