

Known Issues

Before installing or upgrading AtScale to C2024.7.0, please review this section to be aware of all known issues.

Multiple Databricks Connections Are Unsupported

AtScale C2024.7.0 does not support more than one Databricks connection per data warehouse configuration. Assigning an AtScale engine (large, small, or system) to a secondary connection does not save. This issue will be resolved in a future release.

ATSCALE-22049

Databricks Clustered Tables Are Unsupported

Databricks clustered tables contain hidden columns, which cause two issues in AtScale:

- ▶ They interrupt Data Preview for the datasets.
- ▶ Their presence in the datasets' SML causes model deployment to fail.

As a workaround, you can remove these columns from the datasets' underlying SML. This will enable you to successfully deploy your models.

This issue will be resolved in a future release.

ATSCALE-22036

Multi-Model Catalogs Accessed Via The Inbound PostgreSQL Interface Not Completely Updated On Deploy

For AtScale installations that use the PostgreSQL interface, deploying catalogs with multiple models can create race conditions that result in only a subset of those models being created in the metadata database.

Due to this issue, customers who make inbound SQL connections using the PostgreSQL interface AND who deploy catalogs with multiple models should not upgrade to this release.

ATSCALE-22003

Cube Overrides Interface Unavailable

In installer-based AtScale, you can override engine settings at the data model (cube) level. In containerized AtScale, the ability to set these overrides is currently only available via API. A new mechanism for data model override management will be introduced to containerized AtScale in coming releases.

ATSCALE-17458

Snowflake Key File Authentication Method Unavailable

For [Snowflake data warehouse connections](#), the **Key File** authentication method is currently unavailable. All other methods are functional. The **Key File** method will become available in a later release.

ATSCALE-21397

AI-Link

AtScale AI-Link is not currently supported for this release. This will become available in a later release.

Services And Integrations Page Not Available

The Services and Integrations page in Settings is currently unavailable. This will become available in a later release.
