Supported TLS Cipher Suites

AtScale supports a few sets of TLS 1.2 cipher suites: one for the Web front-end, one for the engine, and one for LDAPS connections.

Front-End

The AtScale front-end application supports these cipher suites:

- TLS_RSA_WITH_AES_256_GCM_SHA384
- TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256
- TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384
- TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256

Important: It is not recommended to use the TLS_RSA_WITH_AES_256_GCM_SHA384 cipher.

If you need to configure which of these are enabled:

1. Log in to the system where AtScale is installed.
2. Open the `/opt/atscale/current/conf/modeler/app.conf` file with a text editor.
3. Add the `http.ssl.cipherSuites` setting, as shown in the example below; or update it, if it is present:

   ```
   http.ssl.cipherSuites="TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256,
   TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256"
   ```

   Note the following:

   - This is an example with two suites specified. Set your own suites as needed.
   - The suites must be separated with comma signs (,).
   - The list of suites must be in quotes, as shown in the example.
