

Model Additional Levels In A Hierarchy

You can add a level to an existing hierarchy by dragging a dataset column to the desired position in the Hierarchies panel. A hierarchy should go from the most granular level on the bottom to the most general level on the top.

Procedure

1. Open the dimension editor canvas.
2. Drag a dataset column to above or below an existing level in the Hierarchies panel. Look for a thin green line, and drop in the correct position in the hierarchy.
3. Complete the requested information in the **Create a Level** dialog; for details, see [Edit a Level](#).
4. Choose Save.
