

# LastSibling

## Syntax

```
Member_Expression.LastSibling
```

## Input Parameters

### Member\_Expression

A valid Multidimensional Expression (MDX) that returns a member.

## Return Value

Returns the last child of the parent of a member, otherwise known as the member's last sibling. The ordering is determined by the attribute's OrderBy configuration.

## Example

Return the Sales Amount for the date dimension currentMember's last sibling.

```
([DateCustom].[Retail445].CurrentMember.LastSibling, [Measures].[Internet Sales Amount Local])
```
