

PeriodsToDate

Returns a set of sibling members from the specified level of a time dimension, beginning with the first sibling and ending with a specified member.

Syntax

```
PeriodsToDate( [ Level_Expression [ , Member_Expression ] ] )
```

Input Parameters

Level_Expression

An MDX expression that returns a level.

Member_Expression

An MDX expression that returns a member.

Examples

This expression aggregates all sales for the past year, ending with the current date:

```
Aggregate(  
    PeriodsToDate(  
        [Order Date Dimension].[Order Retail445].[Order Reporting_Year],  
        [Order Date Dimension].[Order Retail445].CurrentMember  
    ),  
    [Measures].[salesamount1]  
)
```
