Collibra Connector

Using the Collibra connector you can extract data about projects and data models from AtScale, an upload and use this data in the Collibra data catalog.

Prerequisites

- You have a development system with Maven, IntelliJ IDEA, and Git installed.
- You know the user names and passwords for accessing the APIs of AtScale and Collibra.

Procedure

Do the following on the development system:

1. Clone the AtScale Collibra Connector repository.
2. Follow the steps in the README file to build the connector.
3. Follow the steps in the README file to run the listener, setup, extraction, and sync.
