

Managing The AtScale Engine

The engine refers to the component of AtScale that serves the published OLAP cubes, processes queries, and manages aggregates. The initial engine instance is created during installation. BI applications connect to a cube running on the AtScale engine.

This section describes how to manage the AtScale engine. It covers these topics:

- ▲ [Modifying the AtScale Engine](#)
- ▲ [Changing Engine Settings](#)
- ▲ [Connecting with Alternate Vanity URLs](#)
