

Settings For Enabling And Changing The Compression Factor

Use these settings to specify a compression factor. This factor is a measure of the quality of a proposed aggregate. It is calculated as the number of rows in the fact dataset divided by the estimated number of rows in a proposed aggregate.

To access these settings:

Restriction: Your user ID must be a super user.

1. Choose **Settings** from the main navigation, select **Engine**. Use your browser Find to search for each setting.

Settings

AGGREGATES.CREATE.THRESHOLD.ENABLED

Set to **True** to turn on the setting AGGREGATES.CREATE.COMPRESSION.THRESHOLD.

AGGREGATES.CREATE.COMPRESSION.THRESHOLD

Specify the compression factor that aggregates proposed by the engine must meet or exceed.
