

# Grant Design-Time Permissions

You can grant users permissions to read, edit, and delete cubes in a project. Set permissions once for all cubes in a project (both existing and future cubes) and then override the permissions per cube when necessary.

## Before You Begin

Ensure that your user ID has been assigned the Super User or Organization Administrator role.

## Procedure

1. Select **Projects** on the main navigation and then click the name of the project.
2. Follow one of these steps to determine the scope of the permissions that you are granting:
  - ▲ To set the Design-Time permissions for the entire project, select **Security** from the project overview menu.
  - ▲ To set the Design-Time permissions for a single cube, click cube name to go to its overview page and click **Security** at the top of the cube overview menu. Select **Design Permissions**.
3. Select the appropriate design permissions for each user.
4. Click **Save**.
