

MEMBER_KEY

The value of the member key in the original datatype. `MEMBER_KEY` is for backward-compatibility. `MEMBER_KEY` has the same value as `KEY0` for non-composite keys, and `MEMBER_KEY` property is null for composite keys.

Syntax

```
Member_Expression.MEMBER_KEY
```

Input Parameters

N/A

Return Value

Returns the member key value. The type depends on the mapped column binding.

Example

Sales for "Red" members only, else 0.

```
IIF([Color Dimension].[Color].CurrentMember.MEMBER_KEY = "Red",[Measures].[salesamount1], 0)
```
