

POW

Syntax

```
POW(Numeric_Expression, Numeric_Expression)
```

Input Parameters

Numeric_Expression

A valid double-precision expression to be raised to a power.

Numeric_Expression

A valid double-precision expression that specifies a power.

Return Value

Returns the first argument raised to the power of the second argument.

Examples

Raise the [Internet Order Count] measure to the second power.

```
POW([Measures].[Internet Order Count], 2)
```
