PrevMember

The `PrevMember` function returns the member that precedes the specified member in the level.

Syntax

`Member_Expression.PrevMember`

Return Value

Returns the previous member value in the level of the specified member.

Input Parameters

Member_Expression
    An MDX expression that returns a member.

Examples

The following example returns the order quantity for 2006, given the specified member 2007.

```
SELECT
{
  [Order Date Dimension].[Order Date Month Hierarchy].[Order YearMonth].[2007].PrevMember
} ON 0 ,
{[Measures].[orderquantity1]} on 1
FROM [Internet Sales Cube]
```
