

Viewing A Sample Of Dataset Rows

AtScale lets you to view a sample of a dataset's rows. Viewing a sample of rows allows you to examine the column values and decide which data to base your cube attributes on.

About This Task

AtScale queries the underlying table and returns a limit of 10, 50, 100, or 1000 rows. You can configure the limit.

Procedure

1. Open the cube canvas that has the dataset you want to view, or drag a dataset onto the canvas from the project library.
2. Click the hamburger icon in the dataset header. That icon looks like this:

3. Select **View Raw Table Data**.

Columns are listed in natural column order. Use the filter control to locate a particular column name.

Note: If your data warehouse is an instance of Google BigQuery, calculated columns do not appear.

4. Choose the number of rows you want to view. (Default: 10 rows).
5. Close the preview pane when you are done.
