

Navigating The Cube Designer Canvas

This section explains how to navigate in the cube design canvas.

Tour Tips In The AtScale Design Center

When you first sign in to AtScale and open a cube in the Design Canvas, a series of tour tips guide you in navigating the canvas, highlighting:

- ▲ The Toolbar icons, which present frequently-used items for data modeling
- ▲ The Data Sources panel, where you add fact tables
- ▲ The Dimensions panel, where you add dimensions after fact tables
- ▲ The Design Canvas, where you join fact tables and dimensions and create relationships between them

To view the tour tips again: open the menu for your user in the top right part of the screen, choose Profile, and then choose Restore my defaults in the Restore Modeling Defaults section. This will reset the arrangement of your panels, and show the Designer Canvas tour tips again.
