Settings For Enabling And Prioritizing Builds Of Aggregate Instances

Use these settings to enable prioritization, specify whether new aggregates should be prioritized over existing ones, and specify whether user-defined aggregates should be prioritized of system-defined ones.

To access these settings:

> ⊖ **Restriction:** Your user ID must be a system administrator.

Choose **Settings** from the main navigation, select **Engine**. Use your browser Find to search for each setting.

Settings

AGGREGATE.QUEUE.PRIORITY.MODE - accepts integer values 0-2.
- 0 - prioritizes building new instances before existing instances that are part of a batch build. This was the default behavior before AtScale 2021.3.0.
- 1 - prioritizes building batch instances before new instances. This is the default behavior as of AtScale 2021.3.0.
- 2 - prioritizes building aggregate instances in order of definition timestamp (FIFO).

AGGREGATE.QUEUE.PRIORITY.USERDEFINED.ENABLED
Set to **True** to prioritize the building of user-defined aggregates over the building of system-defined aggregates.
