

# Rolling Back AtScale

You can rollback an AtScale instance to a previously backed up instance.

## Before You Begin

You must have already created a backup of the <AtScale\_install\_dir> for the instance of AtScale that you wish to restore.

## Procedure

1. If AtScale is running on the node where you plan to rollback the AtScale instance, stop AtScale completely on the node by running this command:

```
<AtScale_install_dir>/bin/atscale_stop
```

2. Move or delete the <AtScale\_install\_dir> directory.
3. Move or copy the backed up instance to <AtScale\_install\_dir> and ensure that it is owned by the user ID atscale.
4. Start up AtScale.

```
<AtScale_install_dir>/bin/atscale_start
```
