

Resolved Issues

The following issues have been resolved.

Hadoop Recertified For I2024.2.1

I2024.2.1 resolved query issues found with Cloudera CDP. Cloudera Hadoop and HP MapR are supported in I2024.2.1 and moving forward.

ATSCALE-21563

AtScale Engine Failed To Start After Upgrade

After upgrading, the engine failed to start with an error from pgwire. This issue has been resolved.

ATSCALE-21572

PostgreSQL Was Only Listening To The Localhost Port

PostgreSQL was only listening to the localhost port, which caused the pgwire interface to fail on FQDN installs. This issue has been resolved.

ATSCALE-21601

Microsoft Excel: Reports Containing Calculation Groups And Calculated Measures With Hidden Measures Failed

In Microsoft Excel, reports failed when they contained both a calculation group and calculated measure that contained a hidden measure. This issue has been resolved.

ATSCALE-20788

Excel: Level Hierarchies With Key Columns >16 Digits Did Not Display Properly

Excel reports did not properly display hierarchy levels that used Long values longer than 16 digits as their key columns. When these levels were expanded, Excel created new rows, rather than displaying the full levels. This issue has been resolved.

ATSCALE-19778

Excel: ParallelPeriod Produced Incorrect MTD Values On And After Leap Years

In Excel, MDX expressions that included the `ParallelPeriod` function produced incorrect MTD values on and after leap years. This issue has been resolved.

ATSCALE-20780

Microsoft Power BI Online Service: The Export Data Option Failed With Matrix Visual Reports

In Microsoft Power BI Online Service, using the **Export Data** option from a matrix virtual report failed when both of the following conditions were true:

- ▶ The AtScale model used in the report contained a security dimension with a lookup rule of **Use Filter Key**.
- ▶ The Power BI report was created with a connection that included `daxdialect=tabular` or `daxdialect=superdaxmd`.

This scenario also caused queries to fail in AtScale. This issue has been resolved.

ATSCALE-20271

Power BI: Reports Containing Measures With UTCNOW() Failed

In Power BI, reports containing measures that used the `UTCNOW()` DAX function failed. This issue has been resolved.

ATSCALE-19848

Power BI: Incorrect Outbound Queries Generated When Filtering By NULL And Using SuperDAXMD

When connected to Power BI using SuperDAXMD, filtering reports by NULL values incorrectly yielded no results. This was caused by incorrect outbound queries being generated in AtScale. This issue has been resolved.

ATSCALE-18260

Power BI: Calculation Group Totals Did Not Display In Some Situations

In Microsoft Power BI, calculation group totals did not display in visualizations that had multiple measures selected and were filtered by a subset of the calculations. This issue has been resolved.

ATSCALE-20030

Power BI: Applying Multiple Degenerate Dimension Level Slicers Reset Other Slicers

In Power BI, applying multiple slicers based on degenerate dimension levels reset other slicers in the report to **All**. This occurred when all slicers involved were based on degenerate dimension levels. This issue has been resolved.

ATSCALE-18032

Tableau: Date Offset Queries For MS SQL Server Were Not Supported With PostgreSQL Drivers

Previously, AtScale did not support Tableau-generated Date Offset queries (e.g. `Now() - INTERVAL 30 DAYS`) for MS SQL Server using AtScale's Postgres interface. This issue has been resolved.
